## SKILLS        React, Redux, Ruby, Ruby on Rails, Javascript, jQuery, SQL, Git, HTML5, CSS3, AWS, Firebase, WordPress

## PROJECTS

**CumulusNote** (Rails, React, Redux HTML5, AWS and CSS3)                                                                    **Live Site |Github**
*A fullstack single-page SoundCloud clone where users can upload songs, listen to other users songs, create profiles and comment on songs.*
- Created a custom playback bar that utilized AWS linked files to allow users to play user-uploaded songs globally across the site.
- Utilizing AWS and CSS3, implemented a song upload form that allowed users to add their own songs to the site.
- Using a combination of GET requests, CSS3 and React / Redux, designed a users profile page to allow other users to explore that users uploaded music.
- Developed a landing page, that allowed both logged in users and visitors to explore the most recently uploaded music, when they visited the homepage.

**ActionBoxd** (Javascript, HTML, CSS3, MongoDB and React, Docker)                                                        **Live Site | Github**
*A MernStack single-page Letterboxd clone that allows users to mark films as watched, rate and review films.*
- Developed an administrative dashboard to allow admin users to add Actors and Films rapidly and without having to touch the raw MongoDB data.
- Oversaw the development of the application, approving 95% of all merge requests and helping- the team layout all components to verify smooth integration.
- Created a system to aggregate user ratings to display an average star rating on the landing page of the site, utilizing Javascript, HTML and CSS3.
- Engineered the user profile page and the three different views that users can experience with a combination of React, HTML and CSS3.

**QuackerClicker** (Javascript, HTML, CSS3 and Firebase)                                                                        **Live Site | Github**
*A Javascript single page incremental game where users click the duck to gain quacks and then use those quacks for upgrades.*
- Created the game from scratch, developing the duck and goose graphics with Adobe Illustrator.
- Engineered a system using Javascript, HTML and CSS3 to manage upgrades and auto-quackers on the backside of the site.
- Developed an achievements system that included both menus to view the achievements/ new ducks and a popup ingame to allow users to see when they unlocked a new duck.
- Deployed the game using Firebase and then after promoting the game on Reddit, used the included analytics to keep track of user interactions.

## EXPERIENCE

**Disney Photo Imaging (The Walt Disney Company),** *Guest Support*  Orlando, FL                                                2016-2019
